                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1, Application US/08545528D

Sequence 1, Application US/08545528D

Patent No. 653773

TITLE OF INVENTION:
Nucleotide Sequence of the Mycoplasma Genitalium Genome, Fragment
Patent No. 653773

TITLE OF INVENTION:
PATENT OF INVENTION:
PATENT SPEINCATION NUMBER: US/08/545,528D

CURRENT PELING DATE: 1995-10-19

PRIOR FILING DATE: 1995-06-07

PRIOR FILING DATE: 1995-06-07

PRIOR FILING DATE: 1995-06-07

PRIOR APPLICATION NUMBER: US 08/473,545

NUMBER OF SEQ ID NOS: 1

SOFTWARE: PatentIn version 3.1
GENERAL INFORMATION:

APPLICANT: SHIBATANI, TAKEJI
APPLICANT: KATSUKA, HIROYUKI
APPLICANT: KAWAI, ERI
TITLE OF INVENTION: GENE PARTICIPATING IN THE MECHANISM OF
TITLE OF INVENTION: GENE PARTICIPATING IN THE MECHANISM OF
TITLE OF INVENTION: SECRETION OF ESTERASE
NUMBER OF SEQUENCES: 4

Sequence 46, Application US/09897425

Patent No. 6750046

GENERAL INFORMATION:
APPLICANT: MOLONEY, MAURICE M.
APPLICANT: MOLONEY, MAURICE M.
TITLE OF INVENTION: PROPERATION OF THIOREDOXIN REDUCTASE
TITLE OF INVENTION: PROTEINS ON OIL BODIES
FILE REPERENCE: 034547/0106
CURRENT APPLICATION NUMBER: US/09/897,425
CURRENT APPLICATION NUMBER: 09/210,843
PRIOR FILING DATE: 1998-12-18
PRIOR APPLICATION NUMBER: 08/426,021
PRIOR PILING DATE: 1997-04-25
PRIOR PILING DATE: 1997-04-25
PRIOR APPLICATION NUMBER: 08/366,783
PRIOR FILING DATE: 1997-04-25
PRIOR APPLICATION NUMBER: 08/366,783
PRIOR FILING DATE: 1991-02-22
NUMBER OF SEQ ID NOS: 55
SOFTWARE: PATENT VOR: 25
LENGTHARE: PATENT VOR: 2.1
SEQ ID NO 48
LENGTHER APPLICATION VOR: 2.1
SEQ ID NO 48
LENGTHER APPLICATION NUMBER: 07/659,835
PRIOR FILING DATE: 1991-02-22
NUMBER OF SEQ ID NOS: 55
LENGTHARE: PATENT VOR: 2.1
                     APPLICANT: MAIER, Jurgen
APPLICANT: BICKERANAGER, Sandra
APPLICANT: EICKERANAGER,
APPLICANT: SCHWAN, Thomas
TITLE OF INVENTION: Nucleic Acid Molecules Encoding Proteins Which Impart
TITLE OF INVENTION: the Adhesion of Neisseria Cells to Human Cells
TITLE OF ILIVENTALON: the Adhesion of Neisseria Cells to Human Cells
CURRENT APPLICATION NUMBER: US/09/043,302
CURRENT APPLICATION NUMBER: PC/08
EARLIER APPLICATION NUMBER: PC/08

The sequence tag present in the cDNA between the NotI site and the Oligo-dT track served to identify it as a clone from the normalized ventricle at 15 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 223-300, Seq primer: M13 Forward	FEATURES 1. 395 Source /organism="Rattus norvegicus" /orani="Sprague-Dawley" /oref="Laxon:10116" /lab_host="NH-B2" /orane_lib="U-R-B2" /orane_lib="U-R-B3" /orane_lib="U	Query Match BS-0.0%; Score 17.4; DB 2; Length 395; Best Local Similarity 94.7%; Pred.                                                                                                                                                                                                                                                                                                                엄
                             /lab hose="E. Coli strain XLIO-Gold, Tl-resistant, F-"
/clone_lib="Mouse lokb plasmid UUGCIM library"
/note="Wetcor: PWD42tv; Purified genomic DNA from M.
musculus G57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources (Accuments/Anares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch norifice at constant velocity. The sheared DNA
was bunt end-repaired with T4 DNA polymersas and T4
polymucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose get
electrophoresis. Vector DNA was prepared from a derivative
of pMD42 (gi|4732114|gb|AR129072.1); a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XLIO-Gold (Stratagene) cells
and selected for ampicillin resistance."

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/bacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/bacpac/ordering_information.htm). This work
was undertaen as part of the International Bovine BAC Mapping
Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the
British Columbia Genome Sciences Centre, Canada.
Beg primer: SP6
Class: BAC ends.

/clone lib="Sugano mouse kidney mkia"
/clone lib="Sugano mouse kidney mkia"
/clone lib="Sugano mouse kidney; bmE185-FL3; Site l: DraIII
(CACTGTGTG) & site 2: DraIII (CACCATGTG); 1st strand cDNA
was primed with an oligo(dT) primer
[ATGTGGCCTTTTTTTTTTTTTTTTT]; double-stranded cDNA was
ligated to a DraIII adaptor [TGTTGGCTACTGG], digested
and cloned into distinct DraIII sites of the pME185-FL3
vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should
be used to isolate the cDNA insert. Size selection was
performed to exclude fragments <1.5kb. Library
constructed by Dr. Sumio Sugano (University of Tokyo
Institute of Medical Science). Custom primers for
sequencing: 5' end primer CTTCTGCTCTAAAAGCTGG and 3' end
primer CGACCTGCAGCACA."

The invention provides a method for detecting a polymorphism linked to a disruptive mutation in a gene encoding the IkappaB kinase-complex.

a sociated protein (IKAP) on chromosome 901. This involves detecting a sociated protein (IKAP) on chromosome 901. Sequence analysis of the IKAP-encoding gene showed, in chromosomes with the major FD haplotype, a crossition (2507+6T to C) results in the generation of an IKAP mRNA in which exon 20 is spliced out along with intron 20. Sequence analysis of the IKAP gene of individuals heterozygous for the FC chromosome with the most common minor haplotype (minor 2) showed a G to C transversion of notleotide 2390 in exon 19 of the reported IKAP CDNA, resulting in an Arg696Pro aminor ablotype (minor 2) showed a G to C transversion of nucleotide 2390 in exon 19 of the reported IKAP CDNA, resulting in an Arg696Pro aminor aloustitution and disruption of a consensus Ser/Thr kinase phosphorylation site. The present sequence is a primer that can be used in a claimed method for detecting a disruptive mutation in the IKAP consensus servines was used in the genotype analysis of FD alleles. Use with the primer was used in the genotype analysis of FD alleles. Use with the probands homozygous for the major and minor 2 FD probands homozygous for the major and minor 2 FD context parent and the proband were heterozygous for 2507+6T to C. Analysis of 13 probands were homozygous for the major FD haplotype showed that 100% of the probands were homozygous for the major FD haplotype showed that 100% of the probands were homozygous for the major Abhands in the probands were heterozygous for the probands were homozygous for the major and the probands were homozygous for the major and the probands were homozygous for the probands were homozygous for the probands were homozygous for the PD Abhands were heterozygous for the probands were homozygous for the PD Abhands were homozygous for the PD Abhands were homozygous for the PD Abhands were deterozygous for the presence of 25 carriers of 2007+6T to C an
